

FIELD PRACTICE REPORT

Student Name: MUSSA MOH'D MAKAME

Registration Number: 25BIA080

Gender: M

Phone: 255614447486

Academic Year: 9

Organization: E-GOVERNMENT

Organization Address: UNGUJA

SUZA Supervisor: 957336

On-site Supervisor: -

ATTENDANCE SUMMARY

Days recorded: 30

Total hours: 234.93

Date	Sign In	Sign Out	Hours
29 Sep 2026	07:27	-	-
28 Sep 2026	07:05	15:30	8.42
25 Sep 2026	07:00	15:18	8.30

LOGBOOK (29 entries)

28 Aug 2026 — PROJECT PLANNING AND DESIGNING (7.0 hrs)

Today, we planned the development of a Student Field System, which we will start working on Monday by writing the code and continuing with the planning and development of the system.

18 Aug 2026 — Training seccions (4.5 hrs)

Today I learned about CIDR notation, IP addressing, subnetting, default gateway, DHCP and DNS. I also learned the functions of routers and switches in a network, and practiced basic network troubleshooting using commands such as ping

31 Aug 2026 — DEVELOPMENT,CODING, (7.33 hrs)

Today, I worked on developing a Student Field Website. I designed and organized the main structure of the system and created important modules such as Dashboard, Student, Application, Placement, Attendance, Report, Organization, Supervisor, and Settings. I also worked on improving the user interface and navigation to make the system simple and user-friendly. During the development process, I practiced website design, system organization, and basic database integration. This activity helped me improve my skills in web development and understand how different modules of a Student Field Management System work together.

19 Aug 2026 — Network Services – DHCP (7.0 hrs)

Today, I learned about network services, focusing on DHCP (Dynamic Host Configuration Protocol). I learned how DHCP automatically assigns IP addresses and other network configurations such as subnet mask, default gateway, and DNS to devices on a network.

01 Sep 2026 — CODING AND DEVELOPMENT (7.33 hrs)

Activities Performed: Worked on the development of the Student Field Placement Management System (SFPMS). I focused on developing and improving the frontend interface using React, converting existing HTML pages into reusable React components, and fixing JSX syntax and structural errors. Skills/Knowledge Gained: I improved my understanding of React components, JSX syntax, frontend development, debugging, and organizing a web application into reusable components.

20 Aug 2026 — LEARNING PROGRAM (3.75 hrs)

Today we learned the basics of software development, types of software, SDLC stages, UAT for checking if a system meets user needs, and documentation for keeping clear records of the system

21 Aug 2026 — LEANING (7.0 hrs)

Today I learned the introduction to cybersecurity, its importance, common cyber threats and malware, and how to use Google Drive for activities and Google Meet for online meetings

24 Aug 2026 — LEARNING SECCIONS (3.5 hrs)

Today we used Bootstrap to create a simple web page. We organized the project structure, added the required files, and ran the website in Chrome to see how the page appeared

26 Aug 2026 — LEARNING SECCIONS (5.0 hrs)

Today, I learned the difference between templates and frameworks, installed Node.js, created a React project, installed required dependencies, and successfully ran the project.

27 Aug 2026 — React Folder Structure, Components & GitHub Collaboration (6.67 hrs)

Continued learning React folder structure and created reusable components. Customized a Bootstrap template and practiced editing UI elements. Also learned how to share project changes through a collaborative GitHub repository.

03 Sep 2026 — Development of the Student Field Placement Management System (SFPMS). (8.0 hrs)

Today, I continued working on the Student Field Placement Management System using React. I organized the frontend project structure according to the required folders and pages, including student-related pages such as Dashboard, Application, Profile, and Reports. I also worked on correcting import paths and ensuring that the React components match the existing project folder structure. The main focus was to make the frontend structure organized, connected, and ready for further integration with the backend and database.

04 Sep 2026 — PRESENTATION AND MODIFICATION (8.0 hrs)

Today, we conducted a presentation and demonstration of our Student Field Placement Management System (SFPMS) to our supervisor. During the presentation, we explained the purpose, objectives, and main features of the system. We demonstrated important modules including the student dashboard, application, placement, attendance, reports, organization, supervisor, and settings. We also explained how the system can help improve the management of student field placement activities. After the presentation, our supervisor provided feedback, comments, and recommendations for further improvement. We discussed the suggested changes and identified areas that need additional testing and refinement before the final submission of the system.

07 Sep 2026 — Development of the Field Supervisor Portal (7.67 hrs)

Today, I continued developing the Student Field Placement Management System (SFPMS), focusing on the Field Supervisor Portal. I worked on organizing and developing the main pages required for the field supervisor, including the Dashboard, Assigned Students, Daily Logs, and Field Evaluation pages. I also worked on integrating these pages into the React application using React Router and checked the project structure to ensure that the components were correctly imported and accessible. During the development process, I identified and worked on resolving issues related to missing files, incorrect import paths, and blank pages when running the application in the browser. The main goal of today's work was to establish a functional and well-organized Field Supervisor interface that will allow supervisors to monitor assigned students, review daily activities, and conduct field evaluations. This work provides a foundation for connecting the frontend with the backend and database in the next stages of development.

08 Sep 2026 — Frontend and Backend Development (8.33 hrs)

Worked on the development and improvement of the Student Field Placement Management System (SFPMS) frontend using React.js. Modified the Home page interface, integrated the required background image, and improved the navigation bar styling. Also reviewed and organized CSS code to ensure a clean and consistent user interface.

15 Sep 2026 — DEVELOPMENT (7.5 hrs)

Today, I improved the responsiveness of the SFPMS by updating the CSS layout. I adjusted the sidebar, dashboard, cards, forms, and tables to fit different screen sizes, including computers, tablets, and mobile phones. I learned how to use responsive CSS and media queries to create a flexible web system. Some CSS rules were conflicting and caused the layout to break on smaller screens. I reorganized the CSS rules and adjusted the layout for different screen sizes. The system is now more responsive and user-friendly across different devices.

09 Sep 2026 — PROJECT DEVELOPMENT (8.0 hrs)

Today, I continued working on the Student Field Placement Management System (SFPMS). I organized and integrated different React JSX pages, including Daily Logbook, Application, Attendance, Organization, and Report. I also tested the routing and page navigation to ensure the frontend was working properly. I continued configuring the Ubuntu development environment and installed XAMPP for local web development and database management. I tested XAMPP through localhost and accessed phpMyAdmin using the web browser. I also connected the laptop to an external TV using an HDMI cable and configured screen mirroring to display the laptop screen on the TV.

16 Sep 2026 — DEVELOPMENT OF PROJECT (7.5 hrs)

Today, I continued developing SFPMS by configuring the local environment, testing Flask, MySQL, XAMPP, and React connections, fixing system issues, and improving the weekly logbook interface. I also tested data storage and retrieval.

21 Sep 2026 — Continued developing the Student Field Placement Management System (SFPMS). (7.8 hrs)

Improved the student authentication and login flow. Integrated the application status with the student dashboard. Worked on the batch number generation after application approval. Improved access control for Dashboard, Placement, Daily Logs, and Reports. Tested the system and fixed errors encountered during development. Continued integrating the frontend with the Flask backend. Skills/Knowledge Gained: Gained more practical experience in React.js, Flask, API integration, authentication, database management, and role-based access control.

22 Sep 2026 — CONTINUE IN DEVELOPMENT (7.25 hrs)

Today, I continued working on the Student Field Placement Management System (SFPMS). The main focus of the day was improving the system interface and ensuring that it works properly on different pages and devices. I worked on the sidebar and hamburger menu to make the navigation more responsive and user-friendly. I ensured that the hamburger menu works consistently across the Student, Admin, and Supervisor sections without interfering with the page content. I also continued testing the communication between the frontend and backend systems. I checked the API connections and routes to identify errors that could prevent users from accessing different system features. In addition, I tested the system using both localhost and the local network to ensure that it can be accessed by other devices connected to the same network. During the development process, I encountered some layout and positioning problems with the sidebar and hamburger menu. I resolved these issues by adjusting the CSS styling and component structure. This activity helped me improve my understanding of responsive web design, React components, API communication, routing, and network-based system testing. Overall, the activities completed today improved the usability, responsiveness, and accessibility of the SFPMS and provided practical experience in troubleshooting and developing web-based information systems.

10 Sep 2026 — CONTINUE CODDING AND DEVELOPMENT (8.0 hrs)

Today, I continued working on the development and integration of the Student Field Placement Management System (SFPMS). The main activity focused on connecting the Organizations module of the React frontend with the Flask backend and database. I worked on API integration to ensure that organization information stored in the database could be retrieved and displayed correctly on the frontend. I tested the organization API and verified different data fields, including organization name, address, contact person, contact phone number, and organization identification number. I also checked the communication between the frontend, backend, and database to make sure that data was being transferred correctly. During the development process, I identified some integration issues related to API requests and frontend data handling. I reviewed the backend endpoints and frontend components, corrected the necessary configurations, and tested the system again. The testing helped confirm that organization records could be successfully retrieved from the database and displayed through the user interface. Through this activity, I gained more practical knowledge of React and Flask integration, REST APIs, database communication, debugging, and testing. The work also improved my understanding of how frontend applications communicate with backend services and how database records are managed within a complete web-based system.

17 Sep 2026 — MODIFICATION (7.5 hrs)

Today I worked on the SFPMS login system. I removed the "Login As" option and made the system use the user role from the database. I also tested login for students, supervisors, and administrators.

11 Sep 2026 — FRONTEND AND BACKEND CONNECTION (8.5 hrs)

Today, I continued working on the Student Field Placement Management System (SFPMS). I focused on connecting the frontend with the Python Flask backend and preparing the API integration so that data from the frontend can be processed and stored correctly in the backend database. I also reviewed the application structure, authentication routes, and API endpoints to ensure that the frontend can communicate with the backend properly. In addition, I checked the dashboard and sidebar navigation to make sure that the correct pages are displayed and that navigation works as expected. I also continued testing the system and identifying areas that require adjustment before deployment. The main goal of today's work was to improve the connection between the frontend, backend, and database and ensure that the system functions correctly as an integrated application.

18 Sep 2026 — MODIFICATION (7.5 hrs)

Today, I worked on the SFPMS project by troubleshooting the frontend development environment. I fixed Node.js and npm setup, installed NVM, updated Node.js, and worked on resolving npm dependency errors affecting Vite.

14 Sep 2026 — SFPMS System Development and Database Configuration (8.0 hrs)

Today, I worked on the Student Field Placement Management System (SFPMS). I configured and tested the MySQL database and phpMyAdmin environment, checked the sfpm_db database, and worked on connecting the system backend with the database. I also tested server configurations and reviewed database credentials to ensure proper system operation.

28 Sep 2026 — development (7.5 hrs)

Today, I worked on developing and improving the school management system. I reviewed the Finance module, checked payment and student data handling, and identified areas requiring correction. I also tested the system functionality and continued improving the interface and database integration.

23 Sep 2026 — MODIFICATION OF THE SYSTEM (7.17 hrs)

Today, I worked on the development and configuration of the Student Field Placement Management System (SFPMS). I focused mainly on the backend, database connection, and network accessibility of the system. I started by checking the MySQL database and phpMyAdmin configuration to ensure that the SFPMS database could be accessed correctly. I also worked on the MySQL user configuration and investigated authentication issues encountered when accessing the database through phpMyAdmin. I continued by troubleshooting the Flask backend environment. I located the correct Python virtual environment and verified the project structure. I configured the Flask application to run on host 0.0.0.0 using port 5000, allowing the backend to be accessed by other devices connected to the same local network. I also investigated the "Failed to fetch" error that occurred when users attempted to log in through another device. I learned that using localhost or 127.0.0.1 in the frontend API configuration can prevent other devices from reaching the backend. Therefore, I worked toward configuring the frontend to use the computer's local network IP address. Overall, today's activities improved my understanding of Flask, MySQL, virtual environments, API connectivity, and network-based system deployment.

24 Sep 2026 — DEVELOPMENT (7.17 hrs)

Today, I continued working on my software development and system administration tasks. I focused on understanding and practicing Docker and its role in application development and deployment. I also worked with the Linux terminal to manage software packages and system dependencies using dpkg and related commands.

25 Sep 2026 — DEVELOPMENT (7.25 hrs)

Today, I worked on the SFPMS by configuring the Flask backend and React frontend for network access. I tested the API, fixed CORS and connection issues, and checked the MySQL database through XAMPP/phpMyAdmin. I also tested system access across the local network.

29 Sep 2026 — DEPLOYMENT of the SYSTEM (7.33 hrs)

Today, I worked on deploying the NIA School and Madrasa Management System. I migrated the database to Aiven MySQL, configured the Flask backend on Render, installed required dependencies, and deployed the React frontend. I also tested the API, database connection, and resolved deployment and CORS configuration issues.

WEEKLY SUMMARIES (7)

7 weekly summaries on record.

EVALUATIONS

Institution evaluated: No

Supervisor evaluations submitted: 0
